

## Questionnaire to answer before consulting the experts

- 1) Provide an abstract for your project
- 2) List the core tasks/milestones of your project
- 3) Can you name who will be performing the different tasks in your project? If any of the tasks will be performed by someone outside of your team, explain what support you would need.
- 4) Provide details about the type of data resource/services that you will be using (dimensions, data models, ontologies, current storage and hardware, containerisation, curation, software and licenses...)
- 5) If applicable: Share key features of your workflows (steps of the workflow, ontologies, containerisation, workflow engine, software and license, registry, repository...)
- 6) If applicable: Describe what compute and data resources you will need (CPUs, GPUs, RAM, GBhr storage for research data, storage for results, (archive)...)
- 7) Add any specific questions that you might have for the experts
